B.A. in Computer Science from An-Najah university (2018-2022), I have software skills and a variety of experiences in programming languages like C++ and Java. Also I am good in data structure, object oriented and web development.

During Study

- Excellent knowledge of Java language
- Excellent knowledge of C++ language
- I have some knowledge on PHP & Python languages
- I have knowledge of the following languages: Html, CSS, JavaScript, and AngularJs.

- Worked on several projects including:

GRADUATION PROJECT

JAN 2022
– Present

- A complete project for doctors
- Anyone can book an appointment with any doctor within the times available to him
- The patient and the doctor can communicate with each other through the site.
- The patient can add his own medical examinations in the form of an image, and our system will analyze the image, extract the names of the examinations and their values, and add them to the user data in the Database.
- Maintain and display all medical examinations in an appropriate manner.
- Each doctor has the possibility of adding and modifying the times of his presence.
- Work was done on strong database.
- Worked in a team and GIT was used to share the code.
- Used AngularJs to build the front-end for the website and we used the Django framework in the back-end side.
- Also we used some Image processing libraries and wrote regular expressions to help extracting medical examinations from images.

- **Doing a project for doctors**
- **Follow all software engineering rules in the project**
- **We used Html, JavaScript and PHP to build the project**
